Subject: Gypsy Moth Trapping 2000

To: George Asmus, District Ranger
Safford Ranger District
Coronado National Forest

Thank you for sending in the delta trap and suspect moth. You will be happy to know that the insect in the trap has been investigated and it is not a gypsy moth.

Please be sure to replace this trap with one of the fresh ones that we have put into the mail for you and continue to monitor it until October.

We appreciate your close monitoring of the traps and prompt attention to a potential problem. One of the reasons that we have not experienced a gypsy moth infestation in Arizona is because we have conscientious land managers such as yourself who are aware of the importance of this detection trapping program.

Thank you again for your cooperation and vigilance. We will keep the record of this trap in our files for future reference.

/s/Roberta A. Fitzgibbon
